Abstract (en)

[origin: WO03097273A1] The inventive method serves to produce a mold from a metallic material. The mold is provided in the form of a casting mold for metallic workpieces. A mold blank is produced by severing it from a cast strand. After the severing process, an anode negative provided for shaping the workpiece is produced inside the mold blank. The casting mold is formed from a continuously cast material during the manufacturing process.
