Abstract (en)

[origin: WO03102283A1] The invention relates to a device (1) for severing a thread that comprises two blades (2, 3). An electric drive (4) enables said blades to be moved counter to the action of leaf springs (6, 7; 9, 10) and into a ready position, from which the blades can be moved back by means of the force of the leaf springs in order to execute a severing process.
