Abstract (en)

[origin: WO03102341A1] The invention relates to a profiled element (1) for a door frame or a window frame, said profiled element being embodied as a hollow profile. The inventive profiled element is characterised by fibres (8) which are resistant to tension in the longitudinal direction of the profiled element, and are arranged in the profiled element, in the form of an additional core (4), at a distance from the neutral fibres of the profiled element.
