Abstract (en)

[origin: WO03098076A1] The invention relates to an automatic gearbox comprising a plurality of gearshift steps with which respectively at least one driving toothed wheel and at least one driven toothed wheel are associated. One of said toothed wheels is respectively mounted on a shaft in a rotationally displaceable manner and can be coupled to said shaft in an essentially rotationally fixed manner by means of a connecting device, in such a way that torque can be transmitted by means of said toothed wheel. The invention also relates to a drivetrain, such as a motor vehicle drive train, comprising an automatic gearbox, to a method for controlling an automatic gearbox, and to a method for operating a gearbox system, such as an automatic gearbox, of a motor vehicle.
