Abstract (en)

[origin: WO03100518A2] The invention relates to a method and an arrangement which are used to photographically capture a vehicle, in which an image document (front photo) is provided and is suitable for identifying both the driver and the number plate in a clear and manipulation-free manner. One single synchronous capture occurs in order to produce two geometrically identical offset images having different intensities in an offset manner on the recording medium which can be both a wet-type film and an electronic sensor arrangement. The arrangement is advantageously made of a traditional recording device which is used for photographing the vehicle and an objective lens.
