Abstract (en)  
[origin: EP1510981A2] In the slot machine 1, it is provided the reels 3L, 3C, 3R for variably displaying plural kinds of symbols necessary for games and the main control circuit 71 which determines the symbols stopped along the pay line 8 based on the random number value sampled every game and conducts stop control of variable display of the reels 3L, 3C, 3R based on the determined result. The main control circuit 71 conducts stop control of variable display operation of more than two reels which variably display more than two symbols so that any more than two symbols constructing the symbol combination with the predetermined display mode simultaneously stop along the pay line 8, in a case that the symbol combination stopped along the pay line 8 becomes the predetermined display mode. <IMAGE>
