Abstract (en)  
[origin: WO03102231A1] The invention relates to a method for parallely sequencing nucleic acids, comprised of the following steps: (1) providing a porous support that has areas, in which immobilized nucleic acid molecules are located; (2) placing the support from step (1) into a continuous flow system, and; (3) simultaneously identifying at least a portion of the nucleotide sequence of at least a portion of the nucleic acid molecules.
