Abstract (en)  
[origin: WO03095773A1] The invention concerns a multipurpose seal with lock, comprising a mobile closure apparatus (1) consisting of a housing (2) containing a lock and a fastening element (3) designed to be locked in the housing. The lock comprises a cylinder (7) mobile in the housing between a locking position and an unlocking position. An electronic component (6) capable of being remotely queried and of storing data is maintained in a package (21) which passes through part of the housing (2) and part of the lock cylinder (7) when the latter is in locking position. Thus, any rotation of the cylinder from the locking position causes the component to break.
