Abstract (en)

[origin: WO03106858A1] The invention relates to an elastomer spring (1), especially for rail vehicles, comprising at least one metallic or plastic core (2), one outer sleeve (3) also consisting of metal or plastic, a pad (4) which consists of an elastomer material or is in the form of a leaf spring that is arranged between the core (2) and the outer sleeve (3), and a bottom chamber (11) which is formed below a core shift (H). The inventive elastomer spring (1) has a plurality of stages in the vertical direction X, and consists of at least one first spring (I) and one second spring (II), a chamber (7) being respectively arranged between two springs.
