Abstract (en)
Measured size data of a foot of a user is inputted into foot size data inputting unit 31, and provided to shoe last configuration data production unit 32. Also, in conversion table 33, is stored conversion data produced on the basis of the relationship between a foot size and a size of a shoe last for producing a shoe which fits in the foot determined by an experiment. Shoe last configuration data production unit 32, by referring to conversion table 33, produces ideal size data of a shoe last on the basis of inputted size data of a foot. <IMAGE>
