Abstract (en)
[origin: EP1512352A1] A garment hanger having arms of inverted U-shaped cross-section and formed of plastics material by injection moulding is disclosed. The hanger arm (106) has a notch (108) for receiving a strap (10) of a garment (12) defined by an integrally moulded upper member (116), and a corresponding notch is provided in the other hanger arm. The notch (108) is provided with an integrally moulded stepped portion (118), which acts as a support to prevent downward movement of the corresponding upper member (116) when a garment (114) lying on an upper surface of the hanger arms (4,6) is mounted to the hanger. <IMAGE>
