Abstract (en)

[origin: WO03072203A1] The invention relates to a method for producing golf clubs that are individually adapted to the respective height of golf players. According to the invention, a test person firstly executes, with a test club whose distance from the floor (H) corresponds to the distance of the wrist of the upright-standing test person from the floor, one or more test strokes on a specially prepared flat base. Afterwards, the line of contact of the bottom (5) of the test club head (1) with the base is determined, and the distance of the line of contact from the club head central plane (0) is measured. The length (L) of the shaft (2) is subsequently adapted according to this measured distance. The invention also relates to a template and a chart.
