Abstract (en)

[origin: WO2004012830A1] The invention relates to a method for producing a snow-sliding board (1) like ski, monoski or surf. Said board comprises an upper protective layer which is moulded according to the shape of the upper face (2) thereof. Prior to moulding, a film (10) in the form of a relief is arranged between the upper protective layer and the mould lid in such a way that the upper protective layer is deformed during the moulding in order to adopt the relief (4) of said film. After moulding, the film (10) is withdrawn in such a way that the relief (4) are formed on the upper face (2) of the board.
