Abstract (en)

[origin: US2003230582A1] An integrally formed ensemble of interconnected, separable containers and associated lids is adapted for use as disposable containers for condiments, sauces, and the like. The interconnected assembly typically includes a first plurality of containers arranged in a first linear array and a second plurality of containers arranged in a second linear array wherein the first linear array and the second linear array are secured to each other by way of a plurality of tear portions. First and second pluralities of lids are hinged to the containers and outwardly disposed with respect thereto such that the lids and containers are balanced during a fill operation.
