Abstract (en)
[origin: DE10206865C1] Process e.g. an interrupt service routine, activated by interrupt signal, is subdivided into sub-processes which each supply a result. If software process is terminated, e.g. because maximum response time has been reached, then result of a selected sub-process is used as end result of the whole software process. AN Independent claim is also included for the following: an arrangement for implementing the inventive method.
