Abstract (en)  
[origin: EP1515403A2] The apparatus has a belt drive (2) to guide a wire (3) to a swivel arm (4) with a gripper (5). A leading end of the wire is fed to processing stations by setting the arm into a swivel motion and/or a linear motion. A holder (20) inspects a wire end connection or a crimp connection. The gripper holds the wire with pull out force in a longitudinal axis of the wire by linear movement away from the holder. An independent claim is also included for an inspection method for operating a wire-processing apparatus.
