Abstract (en)  
[origin: WO03103900A1] The invention relates to a tool holding fixture for a machine tool (10), particularly for a hand-guided angle grinder, comprising a drive device (12), via which the insert tool (14) having a discoidal hub (64) can be actively connected to a drive shaft (16), and comprising an attaching device (18) that has a retaining position and a releasing position. According to the invention, the attaching device (18), when in the releasing position, enables the insert tool (14) to be connected with positive engagement to the drive device (12) in peripheral direction (20, 22) and, when in the retaining position, also enables the insert tool to be connected with positive engagement to the drive device (12) in axial direction (24, 26).
