Abstract (en)
[origin: WO2004002742A1] The invention relates to a cylinder (01, 01a, 01b) of a printing unit of a rotary printing machine, whereby a number of base bodies with a retaining device for fastening blankets (02a to 02o), which are arranged next to one another in an axial direction on the lateral surface of the cylinder, are arranged next to one another in an axial direction in at least one channel (11, 11', 12) extending under the lateral surface (13) of the cylinder in the axial direction thereof. Instead of base bodies (24), a number of filling elements (26) without a retaining device are arranged next to one another in an axial direction inside channel sections, in which no blanket is to be fastened.
