Abstract (en)

[origin: WO03080450A2] The invention relates to a holder (10) for holding a drink container, for example a can of drink, in a motor vehicle. According to the invention, the holder (10) is embodied in such a way that it can be pivoted back and forth between a vertical non-use position and a horizontal use position. When the holder is pivoted into the use position, a holding element (20) comprising an adjustable opening (22) for the drink container is moved into a position at a distance from a base element (14) by means of a drive device (34, 44, 46), in order to increase the support height of the drink container held and to hold said drink container in such a way that it will not tip.
