Abstract (en)

[origin: FR2840942A1] The lock (10) comprises outside and inside control means which can be inhibited by locking a primary lever (16) and a secondary lever (22) respectively. A driving part (30) connected to the primary lever causes its pivoting from its locking to unlocking positions. A connecting rod (34) arranged between the primary and secondary levers links their angular displacement during outside unlocking.
