Abstract (en)

[origin: WO2004004073A1] The invention relates to a contact device for electric cables having a shield, comprising an arc-shaped contact part (3) which can be secured around the sheath of the cable and is provided with contact elements which protrude in a radially inward manner. Each contact element (5) is embodied in such a manner that it extends to form a point (13) such that during installation of said contact device in a direction of impact which is orientated inwards and in an essentially radial manner, said point penetrates the cable sheath (8) and produces an electric contact with the cable shield (9).
