Abstract (en)  
[origin: EP1516555A1] The back splasher has a dorsal part with passages (1, 3) connected by grooves, and an axle (7) fixed to a shoulder part. Width of the axle is lower than that of the grooves, and length is higher than width of the grooves and lower than diameter of passages so that the axle is inserted in one passage or moves from one passage to the other based on inclination of the dorsal part with respect to the shoulder part.
