Abstract (en)

[origin: EP1516562A2] The drawer is equipped with a system of rails (120, 124, 126) joined to the outer surfaces of the drawer and the inner surfaces of the cabinet facilitating the drawer to be pulled out and to be pushed back after use. An additional tilting function without the removal of the rails (120, 124, 126) required is achieved by the use of a threaded bolt (17, 176), serving as an adjusting element, guided through the bottom (130) of the drawer and engaging with a projection (196) protruding from a holding element (188) located underneath the drawer unit.
