Abstract (en)

[origin: EP1516839A1] The device (10) for the attaching of a complementary product (22) to a printed product (36), has a support element (44) interacting with a holding element (12) in a delivery point region. At least one bending element (18) can bend the complementary product into a V-shape at least in the region of the delivery point without actively gripping the product. The holding element, support element and bending element interact in such a way that the complementary product, folding around an edge (36c) of the printed product, is pressed onto two opposite sides (36a,36b) of the printed product. An independent claim is included for a method for the attaching of a complementary product, and especially an adhesive tape section, to a printed product.
