Abstract (en)

A panel (1) for a panel joining system, wherein the panel (1) comprises a male part on at least one side and a female part on at least one other side. The male part comprises a protrusion with a thickness smaller than the thickness of the panel (1). The male protrusion has a cut (20) so as to define two tongues (21,22), flexible in a transverse direction, wherein at least one tongue (21,22) has a tooth at one end. The female part comprises a groove (30) formed in the thickness of the respective side of the panel. The groove is able to receive the protruding male part of another panel and has an entry narrowing adapted to be passed over by the tooth of the protruding male part. <IMAGE>
