Abstract (en)
[origin: EP1517043A2] Each of two housings has a plurality of chambers. A drive source and a fluid machine constitute a fluid machine unit which is included in each of the chambers. Between the housings, there is a sucking path, and a sucking hole through the inner side wall of the housing is formed to allow the housing to communicate with the sucking path. An exhaust duct having an exhaust fan is connected to the rear wall of each of the housings. The structure facilitates inspection and maintenance of the fluid machine unit.
