Abstract (en)

[origin: WO2004001113A1] The invention relates to a module for textile machines that comprises a plurality of tools (2) with retaining sections (6). Said retaining sections are accommodated in a plastic body (7) which extends through or encompasses the retaining sections (6) in one or more recesses (15, 27, 28), and fixates the tools (2) relative each other in the right position. The positioning of the tools (2) relative a bar (11), however, is achieved by directly placing them between the retaining sections (6) and the bar (11). The interstices present between the retaining sections are filled with plastic material, thereby giving a compact yet light-weight retaining zone (4) for the module (1).
