Abstract (en)

[origin: WO2004003451A1] The present invention concerns a heat convector for heating air in a closed environment comprising an air intake opening (2) equipped with an air filter (3), a heat exchanger (5) for heating the air (4), an air outlet opening (6) equipped with at least one adjustable deflector element (7), said at least one adjustable deflector element (7) being adjustable in a plurality of angular positions between a closed position and a fully open position and being actuated by an electric motor (8) through drive means (10), characterised in that said electric motor (8) is supplied by a battery (19) and is connected to switching means (11, 11a) suitable for switching the operating status of said electric motor (8).
