Abstract (en)
[origin: CA2491361A1] The invention relates to a machine gun comprising a barrel (1), a device (3) , which has a ready position for holding the barrel (1) and a release position for removing or inserting the barrel (1), and comprising a carrying handle (7), which is mounted on the machine gun in the vicinity of said device (3) and which can move in a to-and-fro manner between a non-operational position (Fig. 2) and an operational position (Fig. 3). In order to ensure a secure holding of the barrel (1) without the provision of an additional handle, the invention provides that the device (3) for holding and removing or inserting the barrel (1) can only be brought into the release position once the handle (7) is located in the operational position (Fig.3).
