Abstract (en)

[origin: WO2004006502A1] The invention relates to a system (17) and a method for transmitting and processing messages (3), in terms of the automation of a production plant. Said messages are sent from the automation appliances (1) to an internet message server (2) by means of a data transmission system (4) in the form of the Internet or an Intranet (5). The Internet message server serves the receiver and the distributor of the messages (3). The actual addressee (13) of the message (3) is determined on the server (2) by means of distribution lists (12), and the message (3) is forwarded to the addressees (11, 15), directly or by means of a processing unit (7) which adds further information (8) to the message (3). The messages (3) are stored in baskets (14) and can be buffered. A confirmation message (6) can be sent from the addressees to the automation appliance (1).
