Abstract (en)  
[origin: WO2004006604A1] The invention relates to a method for carrying-out a communication between a first mobile communication device and a second mobile communication device of a subscriber. Said first and second mobile communication devices have a common telephone number and a billing is carried out on the common account. Said commutation is carried out automatically with the aid of a signal between the first and the second mobile communication devices transmitted by means of a wireless interface.
