Abstract (en)  
[origin: EP1518675A1] The machine has a plate (4) rotating around a rotation axis (A-A), and having a core (6) carrying an object to be printed. A gear motor rotates the core around a rotation axis (B-B) parallel to the axis (A-A). Rails (24) guiding a carriage (22), slides (36), a carriage door, a gear motor and a pivoting unit move the core and modify a distance between the two axes, to synchronize the core movement with the rotation of the plate.
