Abstract (en)

[origin: EP1518817A2] The trolley has a undercarriage frame, with a hoisting gear, traveled by running wheels (3, 3a) on a lower flange (4a). A pair of friction rollers (10) is positioned against an under side (4b) of the flange by adjusting the spacing between the rollers via a common pressing mechanism. The rollers are arranged symmetrically with respect to an axis of rotation of the wheel (3a) underneath the wheel (3a).
