Abstract (en)

The present invention concerns a wall anchor system for securing an insulation board (11) within a cavity wall, comprising an inner wall (1), an outer wall (6) and a cavity (7) in between said inner and outer walls in which insulation boards (5) are accommodated, said inner wall comprising at least one wall element having at least one retention groove (31) for receiving at least one wall anchor (2) having a protruding rod member (21) extending from the wall element, when the wall anchor is inserted in the retention groove and secured therein by rotation of the wall anchor, and that at least one insulation board is mounted on said at least one wall anchor. Hereby, an inexpensive wall anchor system is achieved which is particularly suitable for use in relation to lime stone elements. <IMAGE>
