Abstract (en)

The combustor (10), especially for a vehicle's heating device, has a wall section (16) which at least partially is lined with a thermally insulating coating (B i) which has a thermal conductivity of less than 40W/mK and preferably less than 5W/mK. The coating is ceramic or oxide ceramic and preferably a ZrO<sub>2</sub>/Ca coating. The thermally insulating coating is provided on the side of the wall section facing a volume area with increased temperature when the combustor is operating.
