Abstract (en)

[origin: EP1519337A2] A communications device (4) links to an installation (2) on connections (10a-c) firmly attached to the installation for exchange of data and consequently runs an initializing operation, in which an identification key that distinctly identifies the connections is transferred from the connections to the communications device. An independent claim is also included for a device for communicating with a unit, especially for controlling and observing an automation unit in industrial manufacturing.
