Abstract (en)

[origin: WO2004004941A1] The invention relates to a method for fixing components (2) to peripherally closed hollow profiles (3). Walls (4,5) of the component (2) and the hollow profile (3) are connected to each other in a positive fit. In order to fix the component (2) to the hollow profile (3) in a simple manner, independent of position, the walls (4,5) to be joined are placed in an adjacent position and are locally impinged upon by external pressure such that the walls (4,5) are pressed inside (12) the hollow profile (3) and a double-walled indentation (10) is formed, whereupon the walls (4,5) are clamped against each other.
