Abstract (en)

[origin: EP1520955A2] The clamping holder (1) has two interfitting clamping yokes (3,4) each with a clamping cheek (6, 10) and guide cheek (19, 20). The front yoke (3) fits round the guide cheek of the rear yoke and in the fitted state its downwardly angled clamping cheek bears at the front against the window frame (2). A screw threaded rod (9) at the front of the guide cheek engages in a threaded bore (11) in the guide cheek (20) of the rear yoke to connect the two yokes movably together which can then be spaced apart and tightened up by turning the rod to secure the two clamping cheeks against the frame in the fitted state. A commercially available holder for a roller blind can be fitted on the front yoke.
