Abstract (en)

[origin: DE10227463C1] The pressure unit (5) is extended to mount a drive roller (18) of the compression system (11). A loading unit (21, 24, 29) is provided for the pressure roller (17) of this system. A mounting section (19) is included on the pressure unit of the drive roller bearing. The pressure unit itself is extended. A further variant design in accordance with the foregoing principles is described. Grooves are made in the support section, engaged by rails of the suction shoe (14). The support and loading arm employed, include a further rod (32) for guidance and loading of the compression system pressure roller.
