Abstract (en)

[origin: WO2004007864A1] The sheet flashing member (1) comprises a first flange (2) intended to be arranged at least partially in proximity with and substantially in parallel with the roof surface in a mounted position of the sheet flashing member, and a second flange (3) intended to be arranged against the roof penetrating structure in the mounted position. The first flange (2) includes at least one detachment indication (6), such that the part of the first flange between the indication and a first edge portion (4) may be detached from the remaining part of the flashing member.
