Abstract (en)
[origin: WO2004008258A2] The invention concerns an escapement device comprising two means (11, 21; 32, 22) for locking the mechanical torque and two means for unlocking (42, 22; 42, 32) that same torque, the need to perform an unlocking operation between two locking operations prevents tripping in case of impact on a timepiece provided with such an escapement device.
