Abstract (en)

[origin: EP1522967A2] The automatic coupon dispenser comprises a bearing structure (1) for a displaceable deck (2) pushed by elastic means (10) or the like against at least one opening (13) of the box which contains the mechanism and presents the operation of the electric motor (7) commanded by means of a button (12) that can be acted from the outside of the box and said displaceable deck can move in normal direction according to the roller axis for a remarkable distance (3. 4) in order to contain a great amount of coupons. The roller comprises a deck divided into two mobile parts (26) carrying a coupon stamping member (19, 20) for the stamping of the introduced coupon; said members are acted by two protuberances (17, 18) divided by a rotating roll for the selection.
