Abstract (en)

[origin: WO03105638A1] The invention concerns a thin-walled, blown glass ornament that may be repeatedly opened and closed. It is comprised of a spherical, spatial body consisting of at least two modules, top (1) and bottom (2) jointly connected with each other by means of an articulating hinge (5) or elastic band and at least one lock (4) situated on the rim of each module. The top module (1) comprises at least one spatial body and the bottom module (2) may feature a flat bottom (8). At least one additional miniature ornamental object (9) is situated inside the ornament that opens. Both modules may also be connected by means of locks (4).
