Abstract (en)

[origin: WO2004005092A1] The invention relates to a driver assistance system for assisting the driver of a motor vehicle during dangerous or emergency braking situations, wherein the speed of the vehicle (vref), actuation of an accelerator pedal by the driver, actuation of a brake pedal by the driver and the current driving situation, at least the distance and relative speed in relation to a preceding vehicle, are detected and wherein intervention in the braking control occurs based on all detected values. The invention also relates to a device for controlling or regulating a motor vehicle braking system.
