Abstract (en)

[origin: DE10233211A1] A computer system has a database (100) for creating an image of a data model (102) of firmware packets stored in a database (104). E.g. the data model defines firmware packets for different functions e.g. current regulator, speed governor, diagnostics systems, etc. Access to the database is possible via a graphical user interface (106) for configuration options based on the data model. Independent claims are also included for the following: (a) A method for configuring firmware with packets for an automation device.
