Abstract (en)
[origin: EP1524346A2] The assembly (10) to clean a textile machine, and especially a loom, has a blower (12) with a motor (14) to drive a fan wheel (16). The fan draws air from a suction zone with a number of suction channels and a rotating ring filter (22). The filter is cleaned by compressed air blown out from the interior of the filter. The compressed air is delivered from jets (34) deployed over the whole filter height.
