Abstract (en)

The present invention proposes a composable gutter (1) which forms a duct (2) in which liquids or fluids flow. The gutter (1) shows two lateral gutter sides (3) which have seats (5) which are provided with clasping elements which allow the clasping of further gutter components (7) of completion. The gutter components (7) of completion are utilized to make the various gutter covers safer and stronger. The ends of the duct (2) show a profile (12) which shows seats (15) and fins (13). The fins (13) show holes (14) in which both the corresponding part of an additional duct and connecting and stopping elements and/or stoppers (17) are inserted. The stoppers (17) include means for the insertion in the corresponding seats of the duct (2). The gutter is completed with further components, namely, closing and strengthening covers (7) as well as safety and reinforcement elements (8) for the various gutter covers. Finally, there are provided stopping elements acting as stoppers (17). <IMAGE>
