Abstract (en)

[origin: EP1524437A2] The multi-path valve assembly (1) has a base plate (10) to deliver and extract fluid under pressure, e.g. compressed air, through channels and openings. At least one multi-path valve (20) controls a pneumatic assembly through the selective delivery of the compressed air. A pattern plate (30) is between the base plate and the valve, to give the different valve functions and establish the function of the multi-valve assembly and/or a pilot valve (40).
