Abstract (en)

[origin: WO2004009264A1] The drum (1) is fixed to a mounting star (2), on which a shaft (4) for drive of the drum is fixed. The fixing is achieved by means of arrangement of several openings (6) in the mounting star (2) with different entry and exit diameters, whereby a tip (8) corresponding to each opening (6) is arranged on the drum (1), which is introduced through the smallest hole in the opening (6). The tip (8) is subsequently deformed such that the outer surface thereof is pressed against at least the walls (7) of the opening (6), whereupon the fixing is generated.
