Abstract (en)
[origin: WO2004012970A1] The invention relates to a brake-pressure control device with an ABS function and/or ESP function, whereby pump units (25, 25') provided for said functions also assume the function of a booster unit. According to said inventive brake-pressure control device, the amount of hydraulic medium guided to the slave units (15, 15') is determined simply by controlling the induction current control valve (27, 27').
